STRUCTURAL STABILITY CERTIFICATE

We, **M/s. Civil Material Testing Laboratory.**, confirm that we have studied and investigated in general and field tests were carried out on the various structural members to assess the present condition. Further, the theoretical verification of the building/structure was also carried out based on the results of tests conducted and also based on the possible data collected at the site and certain assumptions and we submitted our detailed report on **28th November 2022.**

Based on the outcome of our study, it is certified that the existing "**Sri Chaitanya Techno School**" is located at Munnekolala, Marathahalli, Bengaluru, Karnataka, as it stands, is found to be intact and structurally adequate to resist the loads considered in the analysis.

Note: Even though the above building is structurally sound from the point of long time serviceability it is advisable to carry out the recommended remedial measures for the observed minor distress features in the building for durability consideration.

Maintenance of the building shall be carried out as per standard practice.
